

A Complete Inventory and Manufacturing Chain Execution Solution

Operations Technologies is a top-rated supplier of integrated manufacturing and distribution execution solutions for the process and regulated industries.

This tight focus has resulted in an industry leading suite of solutions that assure regulatory compliance and completely manage the inventory supply chain. Management, control, and traceability begin at the supplier's dock, run through receiving, manufacturing, shipping, all the way through to final delivery at the customer's site.

WCS - Warehouse Control System : Interfaced to business systems or as a standalone, WCS is a full feature process oriented WMS. It manages all aspects of material movement into, out of and inside a warehouse

SFI - Shop Floor Interface : Interfaces to the business system and the WCS to optimize delivery, issuing, and reporting of raw material to a production order and well as reporting and scheduling putaways of finished goods , labor assignment and quality testing

DLS - Distributed Labeling System : Sophisticated and powerful barcode/RFID labeling and documentations (BOL, packing slips, etc) printing station for large and very small facilities

DDS - Dock Door and Load Scheduling : Schedules inbound and outbound docks and assigns to trucks, schedules loading of outbound trucks

SSM – SupplySync Module : Synchronizes, translates and instantly updates the receiver with all pertinent data (item #, lot#, manufacturing date, pallet data, etc) for all shipments. Prints customer specific barcode labels for all major companies
